

ALL REVVED UP SUPERBOATS

Super boats by super car manufacturers: Aston Martin's collaboration with Quintessence Yachts on the handbuilt AM37 which is true to its road-based cousins. The boat will be packing some serious punch, with the twin 600hp Mercury petrols - delivering enough grunt for nearly 60 knots flat out. Two versions of the 11.28m boat will be built initially - the AM37, being sold as a grand tourer, and the speedier AM37 S. The models will be built in resin-infused composite with structural elements made in carbon fibre. Further models are also in the pipeline.
