Latest News

Enough of churning profits from the automotive business, Aston Martin decided to also try its hands at the yacht business. As per the latest officials report dispatched by this British carmaker from its official channel says, it will start manufacturing yachts in association with the Dutch boatbuilder Quintessence Yachts. The first model to roll off the line is AM37 measuring 37 feet (11.3 meters) that will show its face in metal later this year. The image posted here is actually the rendering generated from computer.

For the technical geeks, Aston Martin says, AM37 can attain the max speed of 50 knots (57 mph) where the highly specified version, AM37 S, can flat out the rest at 60 knots (69 mph). Aston Martin's speedboat will feature carbon fiber for the lightweight hull and other composite materials. The styling job was carried out by Mulder Design.

Hence, the maker hasn't revealed about the prices, but Quintessence will build AM37 at a factory in United Kingdom.
