## Aston Martin Powerboat Bows in Monaco

OCTOBER 3, 2017

Two tailor-made Aston Martin AM37S powerboats were presented at this year's edition of Monaco Yacht Show.

Visitors to this year's Monaco Yacht Show personally experienced two prototype Aston Martin AM37S powerboats.

This past weekend, Quintessence Yachts collaborated with Feadship to tender their VIP guests at the Show and enhance their experience with the "Superyacht Safari", a guided tour onboard the AM37S in the Monaco Bay among the extraordinary superyachts produced by the world-famous luxury shipyard.

Finished in eye-catching Diavolo Red with a Cream Truffle leather upholstery and contrast red stitching, the first AM37S presented at the VIP hospitality area at Quai Rainier III showcases the true bespoke nature of the tailor-made powerboat.

The second boat is another equally striking AM37S prototype, presented in Ocellus Teal with a luxurious Foglizzo marine grade Ivory leather hide and natural teak decks.

Each AM37 is completely customizable, making it highly unlikely that any two boats will ever be the same.

Made up of 3,500 unique parts, designed, engineered and created specifically for the AM37 including the one-piece handcrafted double curvature windscreen, which is a piece of art in its own right, the AM37 is the ultimate day boat.

Handcrafted in the UK by Quintessence Yachts, the exquisite 37-foot Aston Martin powerboats fuse maritime and automotive worlds with style and elegance. Combining the highest degree of technology and innovation, the perfect balance of design and engineering, with performance, comfort, luxury and functionality.

The AM37 is available in two different versions: a 'gran turismo' leisure powerboat with a choice of twin 370 hp Mercury diesels or two 430 hp Mercury gasoline engines, and a more extreme AM37S version with twin 520 hp gasoline engines by Mercury Racing.

Among the unrivalled technology featured onboard, customers can enjoy unique carbon fibre sliding cockpit panels which can be remotely operated with a mobile app.

Navigation, the control monitor and entertainment systems are integrated with a 15-inch touchscreen in the dashboard, with advanced functions to control the electric anchor, retractable carbon fibre bimini and retractable swim platform.

Each of these phenomenal day cruisers is manufactured using the latest in composite technologies and features many carbon fibre mouldings, including the upper deck.
